

Canda International—the paper chemicals portal

A NEW YEAR OF CHALLENGES for the paper chemicals industry

2008 is underway, may it bring success and enjoyment! Last year was tough for the paper chemicals industry with sustained high oil prices and the struggle to increase prices and maintain profitability.

The low dollar exchange rate has given a boost to the paper and paper chemicals industries in the USA. We continue to see the growth of a strong manufacturing and supply base in India and China along with growing investment in the Middle East. This all means more competition for the higher cost European paper chemical industry. With a strong fibre base, the outlook for South America and Russia is very positive.

No 2: February, 2008

Consulting on all aspects of paper chemicals A successful Paperex 2007 in Delhi

A new source of dyes, OBAs and flocculants?

There are quality manufacturers of dyes, optical brightening agents and flocculants in India and China. Have you considered these sources?

The costs, quality and reliability of supply make them highly competitive with the traditional suppliers.

Please contact us if you are interested.

Ready for the EU's REACH?

The EU REACH regulations came into force in June, 2007 and the pre-registration stage has started. Do you need help with the process of complying?
